Gamban

What is Gamban?

Gamban is a gambling blocking software that blocks access to all forms of online gambling at device level. Gamban is an effective tool to protect individuals suffering from gambling related harm and to aid along the recovery path.

Gamban blocks access to online gambling across all digital devices (tablets, phones, laptops, desktops)

In 2018, independent charity GambleAware published a study that showed the effectiveness of blocking software and the results proved the Gamban tech to be the most effective in preventing individuals from accessing online gambling content. The report can be found here - https://about.gambleaware.org/media/1813/blocking-software-evaluation-findings-report.pdf

Gamban was awarded with a 'Rising Star' award in 2018 from EGR and "RegTech Provider of the Year' from Gambling Compliance in 2019.

89% Said that they thought **Gamban** was a helpful tool in aiding their recovery.

Survey on Self-Exclusion as Part of Gambling Addiction Treatment & Recovery

Marc Etches, Chief Executive of GambleAware said: "Blocking software can be an effective tool to help those at-risk of getting into difficulties resist the ubiquitous gambling adverts and special offers that surround us these days. This report reinforces the point that such tools work best as part of a treatment package tailored to the individual rather than being effective in isolation. This evaluation gives us the confidence we needed to fund the use of this software for anyone who is referred to our treatment services."

The Safer Gambling Eco-System

- It's important that we understand how we can leverage technology to create a safer digital environment for those suffering gambling related harms online.

- There is no 'silver bullet' solution. Protecting an individual in a digital environment from accessing harmful content is a series of actions that need to be taken, which requires collaboration.

- Digital content is delivered through many mediums and managed by many different software and technology platforms, there isn't just one action that an individual can take to protect themselves.

- In the UK, we have helped to develop a layered approach with three concrete steps that provide a barrier to access to online gambling.
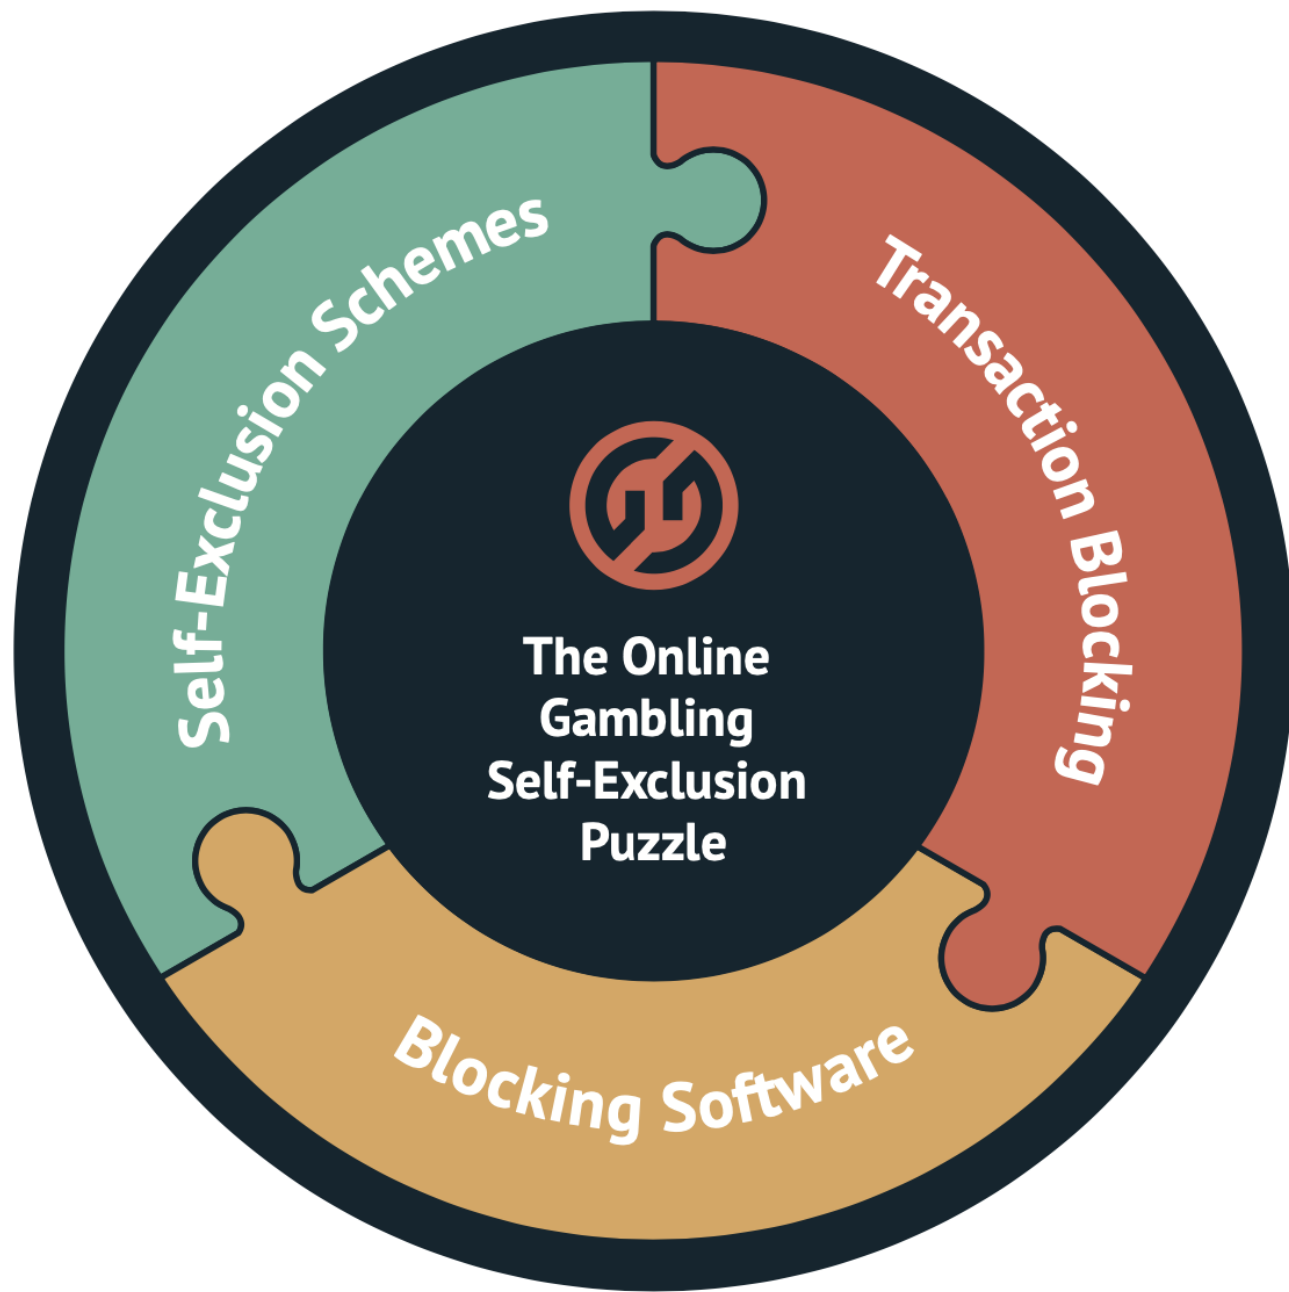

Gamban

Elements to being able to gamble online

Collaboration

Regulators — Industry — Banks — Treatment Providers — Academia

Gamban

Collaboration

Gamban is geared up to work with distributors and to be able to be effectively distributed to cover populations, Gamban is very easily able to plug-in to self-exclusion and other schemes in addition to behavioral health apps.

Regulators
